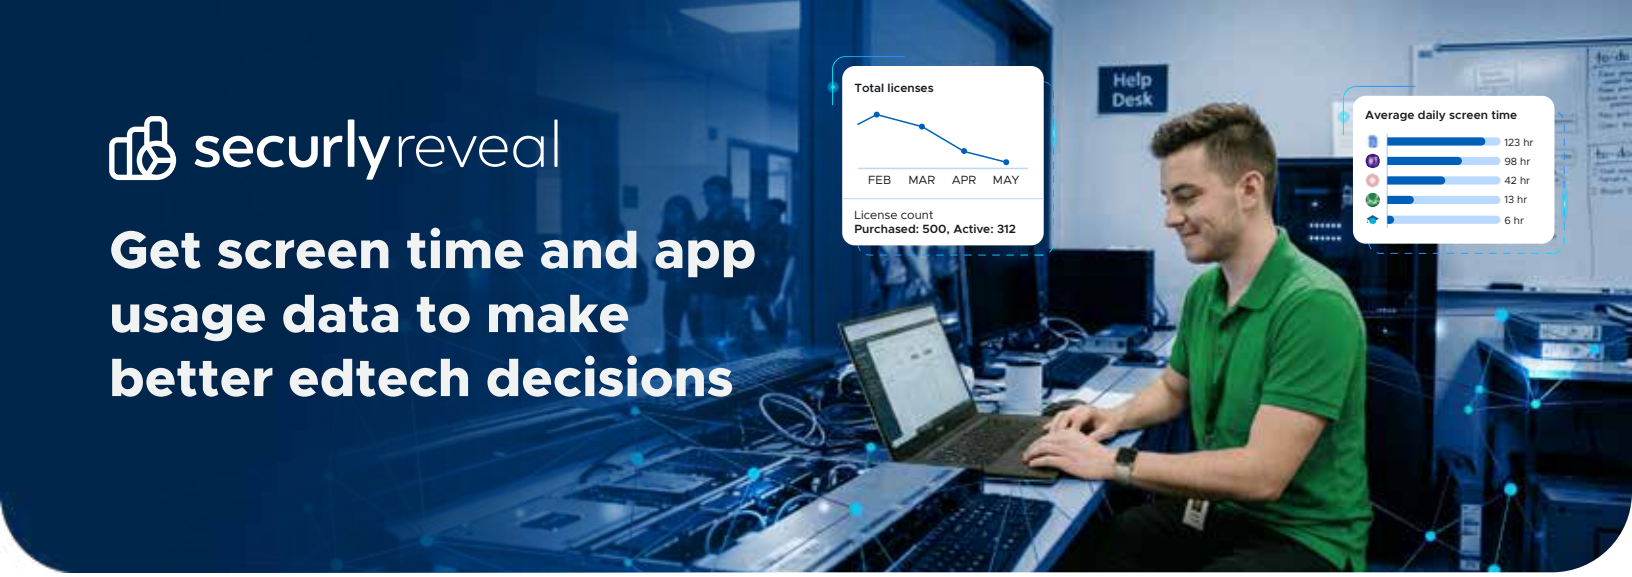
Get screen time and app usage data to make better edtech decisions



School districts are facing questions on two fronts. From parents, boards, and state legislators: how much time are students spending on devices, and what are they doing there? From CFOs and curriculum leaders: when they're on those devices, which of the dozens of edtech tools we pay for are actually being used?

Most districts can't answer either question with data. The screen-time conversation has come to board meetings and state capitols. At the same time, the sheer volume of edtech applications that may be in use makes identifying these hidden budget drains feel like an insurmountable task.

Securly Reveal answers both questions from a single platform. Reveal helps you know exactly what edtech tools are being used, by whom, and how often. It shows you average daily screen time at the district, school, and grade level, and exactly which apps and websites are in use, so you know what's worth renewing and what's worth cutting.

With Reveal, you get complete usage data so you can fully understand the impact of your technology.

Screen time data you can take to the board meeting

- Average daily screen time, district / school / grade
- In-school activity captured automatically across Chromebook, Windows, and Mac
- Period-over-period trends to surface engagement shifts
- Auto-published district-approved apps page for parent and community transparency
- Defensibility for state screen-time mandates and reporting requirements

Know exactly how your edtech tools are being used

- Subscription tracking with approval status, license count, and cost
- Drill from any app to the schools and classrooms driving usage
- Activation and expiration dates with budget tagging
- Surface unused or underused licenses before renewal
- Target tech coaching and PD where adoption is lagging
- Export to CSV for finance, curriculum, and procurement teams

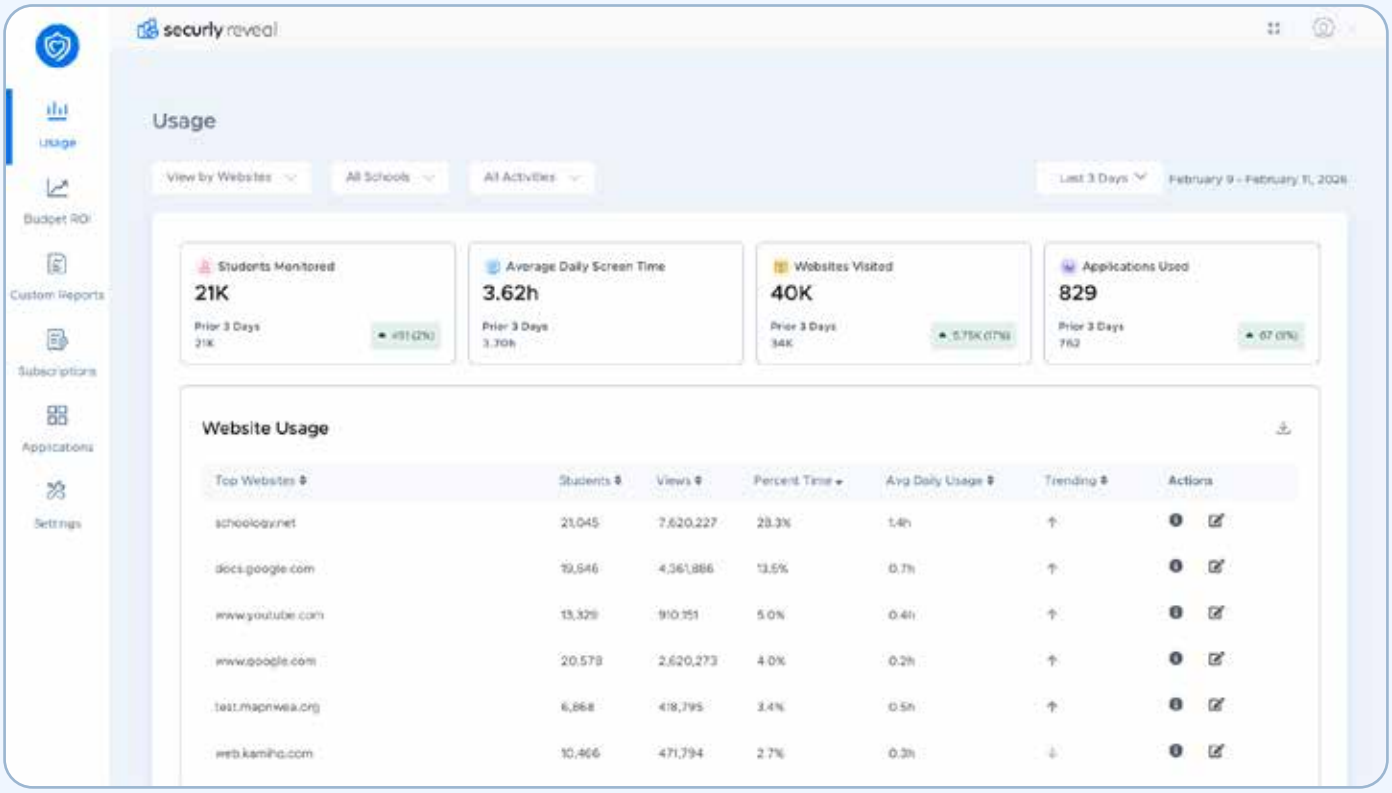
> *"Securly Reveal helps us see the actual usage of products we have purchased across the district. We're able to compare the usage data provided by the service or fill in the actual usage data that they don't provide."*

Jacob Standish, Program Manager
Technology Services, Charlotte-Mecklenburg Schools

How Securly Reveal works

1. Reveal is "always on," automatically collecting screen-time and activity data for the websites and apps in use on student devices in accordance with strict data privacy standards.

2. All activity data is consolidated (screen time, app usage, website usage, and subscriptions) for easy access and analysis.



3. Save reports and export data to inform conversations with your board, your CFO, and your curriculum team.

Benefits

- **Answer screen time questions from parents and school boards with data**
- **Reduce wasted technology spend at the district and school level**
- **Identify opportunities for additional tech training and PD**
- **Visualize aggregated screen time, app, website, and device data in a single dashboard**
- **Access and export reports on demand to inform decisions**
- **Make smart edtech decisions supported by actual usage data**

Features

Device, Website, and App Usage Reporting
Automatically collect activity data from managed devices to understand what apps and websites students are using and what licensed apps are going unused.

Screen Time & Usage Analytics
See average daily screen time by district, school, and grade. Know what applications and websites are being used, by whom, and how often. Track trends over time.

Simple Deployment
Get up and running quickly with our import manager and pre-defined data import templates.

Cloud Delivery
Scale an unlimited number of devices with no server requirement and absolutely no impact on your network performance.

Cross Platform
Works on Chromebook, PC, and Mac devices and in mixed environments.

Accurate Class Rostering
Integrates directly with student information systems (SIS), including PowerSchool, Infinite Campus, and Skyward, to streamline implementation and ensure accurate class rostering.

Subscription & Approval Management
Track every licensed app with approval status (Approved, Pending, Not Approved, Contract, On-Demand), license count, cost, and renewal dates. Auto-publish your district-approved apps page for community transparency.

Data Security
Stores student information as de-identified data accessible only via permission set for each user role.

Data Access
Gain unrestricted access to your data, plus holistic and comprehensive reporting with CSV exports.

Answer the questions your district is being asked

With Securly Reveal, you'll know exactly how much time students are spending on screens, what they're doing there, and which edtech tools are actually being used, so you can make smart decisions backed by data and walk into your next board meeting prepared.
